Active Price Comparison

Active Healthcare Professionals Group has developed a very extensive ordering system that can be used to automate the comparison of prices from any number of vendors, or from within a single vendor. The Software System is called the Active System, and it will reduce your total food and/or supply costs by 5 to 10% without changing anything. You simply place your order on the Active System and then the system searches all your vendors for the lowest price on each and every item you order. You can then fax your orders directly from your computer to your vendors, and/or print separate orders for each vendor. Active Healthcare maintains your system with current pricing from your vendors, or we can train your staff to quickly and easily operate the vendor interface program. The end result is that you have dramatic savings without having to change your operation in any way.

Spend Down Coaching

Traditional Spend Down Sheets are tedious and time consuming to keep. They offer little other than a running tally of expenditures. The Active System completely automates the Spend Down Sheet process. You no longer spend any time on arithmetic and categorizing your costs. The Active System does this all for you and more. Your average daily census is used to project your current savings to the end of the month. Then, you are coached back into budget before you actually get to an over budget situation. This is the most effective way to stay within budget each and every month.

Operation Monitoring

Active Healthcare offers a unique monitoring system that can be used to ensure absolute compliance with operational standards, policies and procedures. For a small monthly fee, our staff will monitor and assist your staff in placing food orders, processing weekly and monthly spend down and cost reports, employee scheduling, cleaning schedules, menu management, temperature recording and compliance, meal counts, meal consumption records, weight management, clinical charting, and discharge summaries.

The Active System can be used to efficiently and effectively facilitate all these functions, and the Active Healthcare Staff can remotely monitor compliance in all these areas, while they continuously coach your staff to improve performance and outcomes.
